Reasons for Allowance

1. Claims 21-24 are allowed over the prior art of record. Claims 21-24 are renumbered as 1-4 respectively.
2. The present invention is directed to an image input/output system which obtains a print-job that includes printing-mode information and print-data, and analyzes the printing-mode information to determine whether the output mode of the print-data is a high-contrast output mode or a low-contrast output mode according to the determined output mode selected by a user. Each independent claim identifies the uniquely distinct features "a first determining unit configured to determine whether monochrome output has been specified by a user; a second determining unit configured to determine whether each picture object included in the print data is a color object; a setting unit configured to set, for the print data, a first mode for calculating the color conversion for the print data at a high bit-depth or a second mode for calculating the color conversion at a low bit-depth based on results of the determinations by the first determining unit and the second determining unit". The closest prior art, Hirota et al. (US 5,973,802) fails to anticipate or render the above underlined limitations obvious.
